Net Revenue Retention	129%	124%	+5 pts

Business Update

Kestrel Data Systems posted another quarter of high growth, with ARR increasing 34.5% year-over-year and EBITDA margin turning further positive as the business continues to scale efficiently. Net revenue retention of 129% reflects strong upsell into existing accounts as customers expand their data protection footprint.

The quarter's key development was the general availability launch of the company's managed data loss prevention module, which shipped on schedule and has already been adopted by roughly a quarter of the existing customer base within its first six weeks. Headcount grew 14.1% quarter-over-quarter, concentrated in engineering and security research roles. The company also renewed its cyber-insurance partnership and reported no material security incidents during the quarter.

Company Overview

Kestrel Data Systems provides data loss prevention and data infrastructure security software to mid-market and enterprise customers, with a particular focus on regulated industries including financial services and healthcare. The company's platform is delivered as a cloud-native SaaS product with agent-based endpoint coverage and API-based integrations into customers' existing identity and data governance tooling.

Founded in Amsterdam in 2019, the company has grown primarily through product-led growth supplemented by a small enterprise sales team focused on the company's largest accounts. Kestrel Data Systems has built a reputation in the European cybersecurity community for rapid time-to-value during customer onboarding relative to legacy data loss prevention vendors.

Market Context

The data loss prevention and data security posture management market continues to see elevated customer interest driven by evolving European data protection regulation and an increasing number of high-profile data exposure incidents across the region. Management characterizes the competitive environment as fragmented, with a mix of legacy enterprise security vendors and a growing set of cloud-native challengers, of which the company considers itself one.

No material changes to the competitive or regulatory landscape were noted during the quarter.

Product & Growth Detail

Management highlighted early cross-sell traction for the managed DLP module as a positive signal for its contribution to ARR in the second half of the year.

Quarter	Revenue (EUR M)	EBITDA Margin
Q3 2024	10.8	2.1%
