Headcount (FTE)	540	536	+1.9%
Backlog (Equipment Orders)	EUR 12.3M	EUR 15.8M	-14.0%

Business Update

Solvex Diagnostics recorded revenue growth of 6.1% year-over-year in Q2 2026, a deceleration from the 14-16% growth rates achieved over the prior four quarters. Growth in the recurring consumables business remained comparatively resilient at 7.4%, while capital equipment orders softened amid longer procurement cycles among European hospital networks.

EBITDA margin declined by 3.6 points to 19.0%, reflecting higher input costs for reagent components and increased freight expenses that were not yet offset by the pricing adjustments implemented in May 2026. Management expects the full benefit of these price increases to be reflected from Q4 2026 onward.

The company confirmed that its next-generation rapid diagnostic panel, originally targeted for a Q3 2026 launch, has been delayed by approximately two quarters pending completion of an additional clinical validation study requested by the notified body. Management does not expect the delay to affect existing product lines or the current revenue base, and has not changed full-year guidance at this time, though it noted the timeline carries some uncertainty pending the outcome of the validation study.
